A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-13 are rejected under 35 U.S.C. 102(e) as being anticipated by Tutt et al., U.S.

Pre Grant Publication 2006/0084347.

Tutt discloses a method for forming a color organic light emitting device. Figure 3 of the reference describes an electrode formed on a substrate with an emission region comprising three emission areas wherein a hole blocking layer is formed on the emission layer (see also paragraphs 0124-0125). Also, the reference discloses that the hole blocking material can comprise an anthracene compound such as

Paragraph 0115 of the reference discloses that an electron injecting layer may be present as well.

Paragraph 0076 of the reference discloses that the three emission areas are green, red and blue.

Art Unit: 1774

The reference also discloses that the first emission layer can comprise an electron transporting material or a hole transporting material and a dopant such as a fluorescent dye (see paragraphs 0076 and 0107). Paragraph 0079 of the reference discloses the use of metal complexes of 8-hydroxyquinoline for host materials suitable for green and red light emission. Paragraph 0093 of the reference discloses the used of anthracene derivatives such as

That can be use for blue or red light emission.
